

# MINAMALIST MAGNETIC PICTURE HANGING POST r00

Each Post Body and Retention Cap features embedded magnets. For mine, I use 0.24 cubic inch neodymium magnets (further specs unknown, p/n lost); Embedded during the print process using GCODE pauses. Other methods of insertion could be implemented, .sldprt files are included for further magnet customization.

Simply mount the Post Anchor (Pt. A) onto any surface using a single #6 drywall screw (anchors optional/based on the exact mounting surface). Repeat this step for all corners of your print (more can be added, depending on your exact hanging needs). Thread a Post Body (Pt. B) onto each Pt. A, then align your print. Use the Retention Tab(s) (Pt. C) to capture your print, suspending it from the wall.

ITEM NO.	PART NUMBER	QTY.
1	MINAMALIST MAGNETIC PICTURE HANGING POST PRT A r00	4
2	MINAMALIST MAGNETIC PICTURE HANGING POST PRT B r00	4
3	MINAMALIST MAGNETIC PICTURE HANGING POST PRT C r00	4
